

Documentation for Galway Tourism app

Home page

The home page features a welcome card as well as a few pictures of Galway.

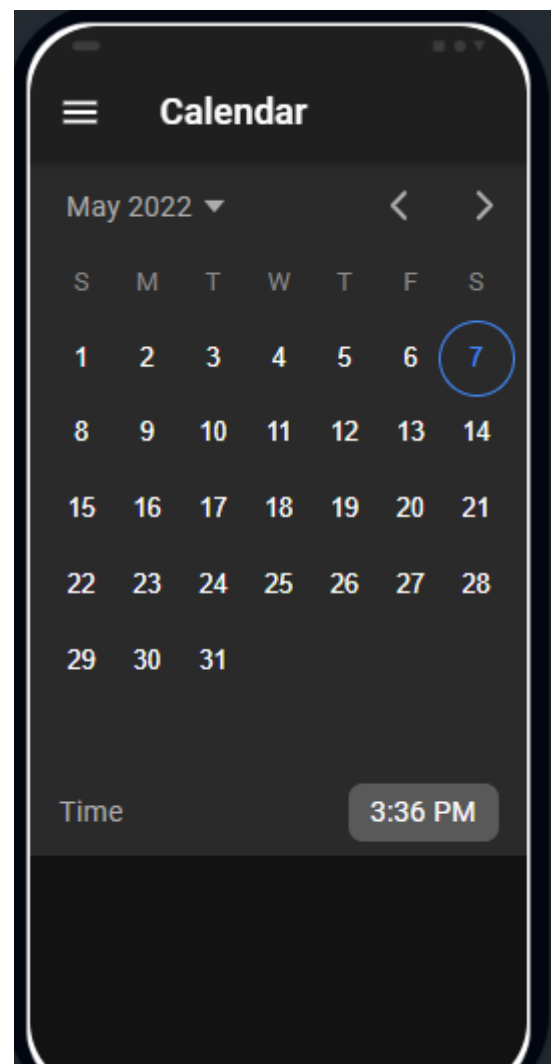

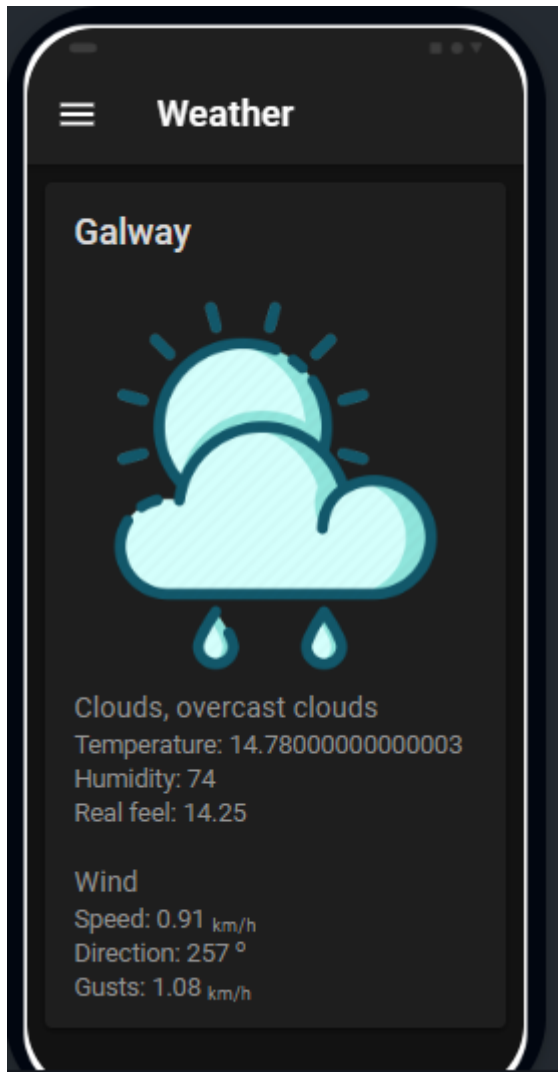

Google Maps

I have integrated Google maps using the capacitor plugin for it. Here it is displaying on an Android emulator.

Calendar page

This is a simple calendar page, it uses a ionic calendar view. I originally intended to have events working on it.

Weather page

This page shows real data for the weather in Galway in the current day. It uses open weather API to do so.

Sightseeing Page

This page has two links to websites that recommend food and things to do in Galway.

As well as that, it features a bucket list to which you can add items to and save.

This bucket list is read in from storage when the app is initiated.

The list is displayed using an *ngFor loop and an array.
